1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 5-7, and 12-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Umezu et al. Umezu et al discloses a refrigeration system having a protection device (a breaker, see column 1, lines 26-33) for the compressor motor, and a control for monitoring a second condition 27, 35 and reducing the load on the compressor when the load on the compressor reaches the point of tripping the breaker. See column 3, lines 63-68.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2, 3, 8, and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Umeza et al in view of Lifson. Umeza et al discloses the claimed invention except for the unloader valve and the economizer valve. Lifson teaches a refrigeration system in which the load on the compressor is reduced by either opening an unloader valve 52 or closing an economizer valve 56. It would be obvious to reduce the load on the compressor in Umeza et al by either opening an unloader valve or closing an economizer valve, in view of Lifson, for the purpose of simplifying the controls for the refrigeration system.

Art Unit: 3744

5. Claims 4 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Umeza et al in view of Vanderstraeten. Umeza et al discloses the claimed invention except for the compressor motor speed control. Vanderstraeten teaches a refrigeration system in which the load on the compressor is reduced by reducing the speed of the compressor motor. It would be obvious to reduce the load on the compressor in Umeza et al by slowing the compressor motor speed, in view of Vanderstraeten, for the purpose of simplifying the controls for the refrigeration system.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
